

### AMENDMENTS TO THE SPECIFICATION

1. (Cancelled)

2. (Currently Amended) An organic light emitting device having a plurality of emission layers between an anode and a cathode,

said emission layers being separated from each other by an equipotential surface forming layer or a charge generating layer,

wherein said organic light emitting device ~~has~~ further comprises:

an optically-transparent electrode; and , at least either inside or outside the device,

a light scattering means, at least either inside or outside the device, for scattering light emitted from said emission layers,

~~wherein said light scattering means is made up by: forming~~

wherein a first electrode of said anode or said cathode ~~by~~ is an optically-transparent electrode ~~to and mount mounted the first electrode on an the~~ optically-transparent substrate; ~~and forming,~~

wherein said emission layers are mounted on the first electrode, and

wherein said light scattering means comprises a second electrode of said anode or said cathode ~~by~~ , which is a light-scattering and light-reflective electrode and mounted on said emission layers.

3. (Currently Amended) An organic light emitting device having a plurality of emission layers between an anode and a cathode,

said emission layers being separated from each other by an equipotential surface forming layer or a charge generating layer,

wherein said organic light emitting device ~~has~~ further comprises:

an optically-transparent electrode; and , at least either inside or outside the device,

a light scattering means, at least either inside or outside the device, for scattering light emitted from said emission layers, ~~and~~

~~wherein said light scattering means is made up by: forming each of said anode and said cathode by an optically-transparent electrode to mount~~

wherein a first electrode of said anode or said cathode is an optically-transparent electrode and mounted on an the optically-transparent substrate, ; mounting

wherein the emission layers are mounted on the first electrode[[]], mounting

wherein a second electrode of said anode or said cathode is an optically-transparent electrode and mounted on the emission layers, [[]] and providing

wherein said light scattering means comprises a light-scattering and light-reflective element on said second electrode.

4. (Currently Amended) An organic light emitting device having a plurality of emission layers between an anode and a cathode,

said emission layers being separated from each other by an equipotential surface forming layer or a charge generating layer,

wherein said organic light emitting device ~~has~~ further comprises:

an optically-transparent electrode; and ,at least either inside or outside the device,

a light scattering means, at least either inside or outside the device, for scattering light emitted from said emission layers,

~~wherein said light scattering means is made up by: forming~~

wherein a first electrode of said anode or said cathode by is a light-scattering and optically-transparent electrode to mount and mounted the first electrode on an the optically-transparent substrate; and forming,

wherein the emission layers are mounted on the first electrode, and

wherein said light scattering means comprises a second electrode of said anode or said cathode by ,which is a light-reflective electrode and mounted on the emission layers.

5. (Currently Amended) An organic light emitting device having a plurality of emission layers between an anode and a cathode,

said emission layers being separated from each other by an equipotential surface forming layer or a charge generating layer,

wherein said organic light emitting device ~~has~~ further comprises:

an optically-transparent electrode; and, ~~at least either inside or outside the device,~~  
a light scattering means, ~~at least either inside or outside the device,~~ for scattering light  
emitted from said emission layers, ~~and~~  
~~wherein said light scattering means is made up by: providing~~  
wherein said light scattering means comprises a light-scattering and optically-transparent  
element ~~on an~~ the optically-transparent substrate~~[[;]], forming~~  
wherein a first electrode of said anode or said cathode ~~by is~~ is an optically-transparent  
electrode ~~to mount and mounted the first electrode on the element; and forming,~~  
wherein the emission layers are mounted on the first electrode, and  
wherein a second electrode of said anode or said cathode ~~by is~~ is a light-reflective electrode  
and mounted on the emission layers.

6. (Previously Presented) An organic light emitting device having a plurality of emission  
layers between an anode and a cathode,

said emission layers being separated from each other by an equipotential surface forming  
layer or a charge generating layer,

wherein said organic light emitting device has, at least either inside or outside the device,  
a light scattering means for scattering light emitted from said emission layers, and

wherein said light scattering means is made up by forming said equipotential surface  
forming layer or said charge generating layer so that it has a light scattering property.

7. (Previously Presented) An organic light emitting device having a plurality of emission  
layers between an anode and a cathode,

said emission layers are separated from each other by an equipotential surface forming  
layer or a charge generating layer,

wherein both said anode and said cathode are formed by optically-transparent electrodes,  
a first electrode of said anode or said cathode being provided on an optically-transparent  
substrate,

the emission layers being provided on the first electrode,

a second electrode of said anode or said cathode being provided on the emission layers,

an optical spacer being provided on the second electrode,

a light reflective element being provided on the optical spacer,  
a distance between said light reflective element and said emission layers being in the range of 1 $\mu$ m to 1mm by means of the optical spacer so as to be set to a distance where an angle dependency of light emission brightness and light emission color can be reduced.

8. (Previously Presented) The organic light emitting device as set forth in claim 6, wherein said plurality of emission layers comprises emission layers of at least two different emission colors.

9. (Original) The organic light emitting device as set forth in claim 8, wherein an emission color of the organic light emitting device is white.

10. (Original) The organic light emitting device as set forth in claim 7, wherein said plurality of emission layers comprises emission layers of at least two different emission colors.

11. (Previously Presented) The organic light emitting device as set forth in claim 10, wherein an emission color of the organic light emitting device is white.

12. (Cancelled)

13. (Original) The organic light emitting device as set forth in claim 7, wherein the light reflective element is a multilayered film of a dielectric.

14-17. (Cancelled)
